General Information and Identification

**Model**
F3—"Booster"—1500 Horsepower Locomotive.

**Type**
A.A.R. designation (B-B). Common designation (0440).

**Arrangement**
The general arrangement of the locomotive is shown on Elevation and Floor Plan Drawing 8090262.

The locomotive consists of one unit complete with engine, generator, trucks and all necessary auxiliaries, to be operated with a "Lead" unit.

**Major Dimensions**
- Distance pulling face of front coupler to centerline of No. 1 truck: 10' 0"
- Distance between bolster centers: 30' 0"
- Truck—rigid wheel base: 9' 0"
- Distance, pulling face front coupler to rear coupler: 50' 0"
- Width over body posts: 9' 10"
- Width over handholds: 10' 7"
- Height, top of rail to top of carlines: 14' 0 3/8"
- Overall height, over fan housings: 15’ 0"

**Drive**
- Driving motors: Four
- Driving wheels: 4 Pair
- Diameter wheels: 40"

**Weights and Supplies**
- Total loaded weight on rails: 230,000 lbs.
- Carbody and Equipment: 154,400 lbs.
- Truck—Total 2: 75,600 lbs.
- Fuel: 1200 gal.
- Sand: 16 cu.ft.
- Cooling water: 215 gal.
- Lubricating oil: 200 gal.

**Clearances**
EMD Clearance Diagram No. 8097194 illustrates clearance conditions for Body, Truck, Motors, Running Gear and miscellaneous underneath equipment.

Truck swing designed for 21° curve or 274' radius, with 2 1/4" free lateral motion in the truck bolster and 3 3/4" in Hyatt Journal boxes.

**Safety Appliances**
All steps, grab handles and other safety appliances cover EMD interpretation of Interstate Commerce Commission requirements.
SECTION 2
Carbody Construction

Framing  Carbody framing designed to simulate bridge construction using a modified Howe truss arrangement. The underframe has center sills joined to the side framing through cross members and side sills. The upper or roof portion is tied together with arched frames and carlines to form a turtle back roof. Ample jacking pads are provided for blocking the locomotive. Front and rear framing is arranged to provide collision protection. The complete assembly is of welded construction throughout, with reinforcing plates used at joints, placed so that no transverse welds are used.

Hatches  Hatches designed to blend with the contour of the turtle back roof and located to provide access for removal of equipment.

Outside Finish  The outside finish consists of paneling, mounted by use of battens, with allowance for deflection of body without buckling of panels. The finish does not assist in the support of the carbody.

Roof sheets are welded directly to the carlines and framing.

Flooring  Consists of plates welded to the underframe acting as a base for application of anti-skid flooring in aisles.

Body Center Plates  Grade "B" steel casting, welded to body bolster assembly. Wear plates applied to bottom and outside surfaces.

Engine Compartments Sash  3/4" safety plate glass. Round sash all stationary with the exception of one sash on each side of locomotive which is hinged, swinging out.

Gutters  Gutters are provided above doors.

Centering Device  A centering device is used at each end of locomotive, preventing excessive offset with multiple unit operation.

Draft Gear  National Malleable type M-380 rubber draft gear (front and rear).

Yoke  Special EMD design for low overhang.

Draw Bar Carrier  Spring supported, part of centering device.
## SECTION 2  
**Carbody Construction**

<table>

<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Uncoupling Device</strong></td>
<td>Operated from both sides of locomotive.</td>
</tr>
<tr>
<td><strong>Coupler Swing</strong></td>
<td>Normal $13^\circ$ swing.</td>
</tr>
<tr>
<td><strong>Front and Rear Connections</strong></td>
<td>Air brake and signal lines fitted with shut-off valves.</td>
</tr>
</tbody>
</table>
| **Body End and Side Doors** | All doors are hinged, fabricated box type.  
The door locks are of special EMD design “L” handle, latched in horizontal position. Outside cab doors locked by inside latch, left and right hand doors of engine room provided with a lock and Railway Coach key. |
| **Weather Stripping**       | For sash—rubber of special design to provide good cushioning and water-tight assembly. For outside doors—rubberized canvas covered sponge rubber at sides, top and bottom. One extra rubber strip at bottom towards outside. |
| **Signal Brackets**         | Combination flag and oil marker light brackets located at rear of unit. Flags and marker lights furnished by railroad. |
| **Diaphragms**              | Attached to body end posts, with standard EMD face plate. |
# Trucks

<table>
<thead>
<tr>
<th>Description</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Truck Assemblies</strong></td>
<td>Two (2) four (4) wheel truck assemblies are provided per locomotive and are interchangeable. Improved riding qualities and greater stability are obtained by a new treatment of load suspension, strictly an EMD development. The truck frame is supported on each of the four journal boxes by twin group coil springs. Bolster springs rest on each end of the spring plank which in turn is carried by swing hangers <strong>pivoted from outside of truck frame</strong>. Each of the four motors is supported by the driving axle to which it is geared, and a special suspension on the truck transom provides a flexible support, damping out the torque shocks of the motor.</td>
</tr>
<tr>
<td><strong>Axles</strong></td>
<td>Oversize ATEA E-12 with oversize wheel and gear seat and journals to suit Hyatt Roller Bearings. A.A.R. material specification M-104.</td>
</tr>
<tr>
<td><strong>Wheels</strong></td>
<td>Rolled steel heat treated, 40&quot; diameter, 2½&quot; rim. Wheel tread ground smooth and concentric after assembly on axle.</td>
</tr>
<tr>
<td><strong>Journal Boxes</strong></td>
<td>Locomotive equipped with Hyatt Roller Bearings 6½&quot; journals of special EMD design. Lateral thrust is taken through a cushioning arrangement directly by the box. Journal box pedestal guides provided with spring steel wear plate.</td>
</tr>
<tr>
<td><strong>Truck Frame and Bolster Pedestals</strong></td>
<td>Steel casting, heat treated, EMD design.</td>
</tr>
<tr>
<td><strong>Pedestal Tie Bars</strong></td>
<td>Lined with spring steel plates bolted to frame.</td>
</tr>
<tr>
<td><strong>Truck Center Plates</strong></td>
<td>Fitted and applied at the lower end of the pedestal legs, held in position by bolts.</td>
</tr>
<tr>
<td><strong>Side Bearings</strong></td>
<td>Truck center plate provided with wear plates, dust guard, and lubricating arrangement.</td>
</tr>
<tr>
<td><strong>Interlocks</strong></td>
<td>Friction type side bearings.</td>
</tr>
<tr>
<td><strong>Swing Hangers</strong></td>
<td>Body and truck interlocks provided each side of the center plate, serving as anti-sluing device in case of derailment.</td>
</tr>
<tr>
<td><strong>Bolster Springs</strong></td>
<td>Made from the same kind of steel as the axles.</td>
</tr>
<tr>
<td></td>
<td>Full elliptic.</td>
</tr>
</tbody>
</table>
**SECTION 3**

**Trucks**

**Truck Brakes**  Clasp brake rigging provided on each wheel, operated by individual brake cylinders.

**Brake Pins**  All pins and bushings hardened and ground, large size. All holes in brake rigging bushed.

**Hand Brake**  Hand brake provided for the locomotive connected to one brake cylinder lever only. All trucks provided with lever for hand brake connection, making trucks interchangeable.
## SECTION 4

### Power Plant and Transmission

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Engine</strong></td>
<td>G.M. Diesel sixteen (16) cylinder, 2 cycle, bore $8\frac{1}{2}$&quot;, stroke 10&quot;, unit injection, Roots blower scavenging through cylinder wall intake, and multi-valve exhaust. Water cooled cylinder liners and heads, oil-cooled pistons, ten (10) bearing crankshaft, drop forged connecting rods, double floating piston pin bushings, and full floating piston assembly. Isochronous governor speed control, separate overspeed trip, lubricating oil and water pumps.</td>
</tr>
<tr>
<td><strong>Main Generator</strong></td>
<td>EMD forced ventilated, nominally 600 volt direct current. Single bearing direct connected to engine crankshaft through alternator rotor and flexible coupling. Capacity suitable to continuously transmit to traction motors the rated output of the engine under all conditions for which the locomotive is offered.</td>
</tr>
<tr>
<td><strong>Alternator</strong></td>
<td>EMD A.C. 149V, 3 phase, 16 pole, built integral with main generator, to supply A.C. power to induction motors driving engine cooling fans and traction motor blowers.</td>
</tr>
<tr>
<td><strong>Traction Motors</strong></td>
<td>Four EMD direct current, series wound, roller bearings, forced ventilated, axle hung motors.</td>
</tr>
<tr>
<td><strong>Auxiliary Generator</strong></td>
<td>Constant voltage, 10 K.W., provides current for control circuits, lighting and battery charging, with automatic voltage regulator.</td>
</tr>
<tr>
<td><strong>Load Regulator</strong></td>
<td>A load regulator is provided which automatically maintains a constant horsepower output, corresponding to each throttle position, over the entire range of locomotive speeds.</td>
</tr>
<tr>
<td><strong>Engine Starting</strong></td>
<td>By motoring of the main generator through use of special starting fields energizes by the locomotive storage battery.</td>
</tr>
<tr>
<td><strong>Engine Cooling</strong></td>
<td>Consisting of two direct driven centrifugal water pumps on the engine, tube-finned type radiators and 4 A.C. motor driven cooling fans located in hatch above engine. Radiator tube-finned type, water cooled oil cooler and water tank, mounted as a unit directly in front of the governor end of engine. Automatic water temperature control and hot engine alarm.</td>
</tr>
<tr>
<td><strong>Engine Lubrication</strong></td>
<td>Gear type main bearing and piston cooling pumps, pressure lubricates all bearings, rods, cams, rocker arms, and pistons, while the scavenging pump with a capacity in excess of the combined total of the two pressure pumps filters and cools the oil. Fine mesh screens protect the suction of all pumps. Low oil pressure and high suction protection provided.</td>
</tr>
</tbody>
</table>
SECTION 4
Power Plant and Transmission

Engine Fuel System
Return flow, single D.C. motor driven gear pump, protected by suction filter in addition to discharge filters to insure clean fuel for the engine. An assembly of sight glasses and relief valves offers visual indication of any system trouble plus protection against excessive pressures.

Engine Exhaust
Dual-fabricated chambers, each with independent exhaust.

Fuel Tank
Tank built of heavy gauge steel, with baffle plates.
Capacity 1200 gallons, located underneath the locomotive body. Filling station each side, vents equipped with flame arrestors. Double sumps with cleanout plugs and non-removable water drains located at bottom of tank.
Each fuel filling station has I.C.C. approved direct reading fuel gauge, indicating fuel level $4\frac{3}{4}''$ from top of tank. Tank is also supplied with a hydrostatic distant type level gauge, indicating levels to within 1" of the bottom.

I.C.C. Requirements
Each filling station fitted with pull ring for emergency fuel cut-off. Similar pull cord located in engine room.

Electrical Control Cabinet
Cabinet houses the locomotive high and low voltage control equipment.
1) High and low voltage control for Main Generator, Alternator, Blower Motors and Traction Motors
2) Battery charging control
3) Engine starting
4) Distribution panel
The cabinet is ventilated and readily accessible for service or unit replacement.

Locomotive Control
Transition forward and backward, with four (4) motor connections, parallel series, parallel series shunt, parallel and parallel shunt. High voltage circuits are safeguarded by ground protective relays.

Storage Battery
32 cell, 64 volt, 426 ampere hour—(8 hour rating) battery located in two cabinets, one on each side of the locomotive directly in front of the fuel tank.

Local Control Station
A local control station located at the governor end of the engine on the cooling water tank is used to individually control the engine and includes the following apparatus:
a) Engine part and stop buttons
b) Isolation switch
c) Master air valve for electro-pneumatic throttle
d) Fuel pump contactor, fuse and switch.
e) Oil pressure and engine water temperature gauges
f) Fuel sight gauges and relief valves.

Signal Alarm System
Alarm bell connected to hot engine and low oil switches with respective lights to indicate the circuit in trouble. No voltage, protection and alarm is provided for the alternator.
### SECTIOn 5

## Air Brakes

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Air Brakes</strong></td>
<td>Automatic and independent brakes are provided on all wheels, with suitable end connections.</td>
</tr>
<tr>
<td><strong>Brake Piping</strong></td>
<td>I.P.S. copper tubing and 300 lbs. solder fittings except at end valves where wrought iron pipe with A.A.R. malleable iron fittings are used. All piping ( \frac{3}{8} ) O.D. and under uses nominal size copper tubing with S.A.E. tube fittings. All brake equipment mounted in a rack requiring a minimum amount of piping and readily accessible for inspection or replacement.</td>
</tr>
<tr>
<td><strong>Main Reservoir</strong></td>
<td>Main reservoir is carbon steel with all-welded seams and heads, ( 26\frac{1}{2}'' \times 50'' ), capacity 25,000 cubic inches. Reservoir is mounted under the locomotive between the battery boxes in front of the fuel tank. Reservoir is fitted with drain cock.</td>
</tr>
<tr>
<td><strong>Air Compressor</strong></td>
<td>One Gardner Denver, two stage, three cylinder, air cooled direct coupled compressor, having displacement of 180 cu. ft. per min. at 800 RPM. Pro rata delivery in proportion to engine speed. Air compressor governor adjusted to provide constant main reservoir pressure with 5 to 10 lb. differential.</td>
</tr>
<tr>
<td><strong>Brake Cooling System</strong></td>
<td>Finned type cooling coils placed between air compressor and main reservoir.</td>
</tr>
<tr>
<td><strong>Sanding</strong></td>
<td>Equipped for sanding in forward or reverse movement through manual operated sanding valve located in control cab of lead unit.</td>
</tr>
<tr>
<td><strong>Sand Capacity</strong></td>
<td>Four sand boxes, capacity 4 cu. ft. each, total 16 cu. ft.</td>
</tr>
</tbody>
</table>

- *Continuous tractive effort is given per 1500 H.P. unit.
  
  See speed-tractive effort curve.

- Special gearing of 65-12 is available as a modification,
  but involves special motors.

### Brakes:

Two combinations are available.

a) 9" cylinders, 2.9 levers, 14" shoes, 300,000 lb. @ 100 lb. cylinder pressure.
b) 10" cylinders, 2.9 levers, 18" shoes, 370,000 lb. @ 100 lb. cylinder pressure.

### Couplers:

The following couplers are available.

a) Type “E”    b) Tightlock    c) Links

*Note*: Solid links used at No. 1 end of “Booster” unit only if operated with
“Lead” unit, thereby allowing the omission of the end doors and some
modifications not otherwise possible.

### Transition:

                          e) Bell  
                          f) Horn  
                          g) Blue flag brackets |
| **Back Up Headlight:** | Portable or permanent. |
SECTION 9

Painting

**General**
Only the best quality materials available are used, with special attention given to both the selection of materials and methods of application to insure a maximum of protection and durability.

**Engine Room**
Inside finished in Suede Grey Dulux, trimmed in black.
All air, fuel, water and lube oil piping color coded at points of connection.

**Outside Finish**
Color arrangement and design to agree with Railroad’s requirement. To be finished in standard lacquer finish as follows:

a) Special primer  
b) Surfacer  
c) Knife glaze  
d) Wet-sand entire surface  
e) Spot surface  
f) Dry-sand and thoroughly clean  
g) Lacquer finish (7 to 10 coats)

**Under Carriage**
Black Dulux, unless otherwise specified.

**Trucks & Tanks**
Black enamel, unless otherwise specified.

SECTION 11

Warranty
and Patents

Warranty:

THIS IS TO CERTIFY that we, ELECTRO-MOTIVE DIVISION, GENERAL MOTORS CORPORATION, LaGrange, Illinois, warrant all new equipment manufactured by us to be free from defects in material and workmanship under normal use and service; our obligation under this Warranty being limited to making good at our factory any part or parts thereof, which shall within one (1) year after delivery of such equipment to the original purchaser, or before such equipment has been 100,000 miles in scheduled service, whichever event shall first occur, be returned to us with transportation charges prepaid, and which our examination shall disclose to our satisfaction to have been thus defective.

This Warranty being expressly in lieu of all other Warranties expressed or implied and of all other obligations or liabilities on our part, and we neither assume nor authorize any person to assume for us any other liability in connection with the sale of our equipment.

This Warranty shall not apply to any equipment which shall have been repaired or altered unless repaired or altered by us or by our authorized service representatives, if, in our judgment, such repairs or alterations affect the stability or reliability of the equipment, or if the equipment has been subject to misuse, negligence or accident.

We reserve the right to make changes in design or add any improvements on equipment at any time without incurring any obligation to install same on equipment previously purchased.

Patents:

The Electro-Motive Division, General Motors Corporation, will not assume liability for patent infringement by reason of purchase, manufacture, sale, or use of devices or equipment not included in and covered by this Specification.
